

Clerque — Owner Guide

Setting the shop up once, then running it: the day, the week, and the money that never goes through the till.

START HERE

Go to the shop page and sign in: the shop code in "Tenant ID", your email, your password, then "Sign in to Clerque Counter". You then choose which part to open — Counter for the till, the menu, the staff and the sales figures; Procure for ingredients, buying and counts; Ledger for the money. Inside any of them, "Switch app" in the left menu takes you to another. Stuck? Email devsupport@hnsCorpPh.com with the shop name, what you were doing, and a photo of what the screen said.

Clerque is three parts on one sign-in. You ring the sale; Clerque records the money, takes the ingredients off the shelf, and works out the profit. You never have to do the accounting, but you can always see it.

IF THE SHOP IS NEW

Do section 4, "First time only", before anything else. Most of those fifteen jobs take five minutes each, and two of them — the closing time and the alert levels — decide whether half of this guide works at all.

1. Your day

1.1 Watch the day

Counter, then "Dashboard". The arrows at the top move between days.

- "Profitability (today)" shows gross profit, what the sales cost you, and the margin.
- Below that: sales today, the average sale, non-cash sales, and voids and refunds.
- Further down: how people paid, your best sellers, and sales by hour.
- A card at the top shows what the kitchen and bar still have to make.

BE CAREFUL

An amber box saying profit reporting is at risk means some items have no cost recorded, so the profit on the screen is flattering. "Fix products now" goes straight to the list. Fix it the day you see it.

GOOD TO KNOW

A cashier who reaches this page sees their own counts only, with no money figures. That is deliberate.

1.2 Read the bell

The bell in the top bar carries everything Clerque wants you to know. A number on it is how many are unread. Press a message to go to the page it is about.

Every night Clerque works out what is out of stock, what is running low and what needs making, and leaves one message. The same bell carries overdue bills, the reminder to close the month, and the end-of-day list of what the day used. If nothing has changed since last night, it does not repeat itself.

1.3 The buy list the staff send

Procure, then "Purchase request".

- 1 The kitchen and the bar press "Request what's running low" on their own screens, and it lands here. Both go on the same list, so nothing is asked for twice.
- 2 On the laptop, "Check stock" pulls in everything at or below its alert level. "Add" puts something on by hand.

- 3 When the list is ready, press "Send to the owners".
- 4 "Send as message" copies it for Viber or Messenger. "Share PDF" makes a copy for the group chat.

GOOD TO KNOW

If nobody sends one, Clerque sends it at closing so the shopping is never missed. That needs the branch closing time to be set — see 5.4.

1.4 Record what was bought

- 1 Open the sent list. Tick each thing that was bought.
- 2 Fill in how many packs, the size of a pack, and the price per pack. Brand is optional.
- 3 Say where it was bought and when. The line adds up for you as you type.
- 4 Press "Save what was bought".
- 5 Something bought that was not on the list: press "Record something you bought", pick it, say how much, fill in the price, save.

TIP

Last time's price is filled in for you and marked as such. Check it against the receipt — it is the single most common way a wrong cost gets in.

1.5 Put the shopping into stock and say who paid

- 1 Answer "Who paid for this?": "Owner paid" out of your own pocket, "Shop cash" (cash kept apart, like the safe), or "Shop bank / GCash".
- 2 Set the day the goods came, and add a note if it helps.
- 3 Add anything that was not stock — delivery, a platform fee — on the charges rows.
- 4 Press "Add it all to stock". If only some arrived, it says so and takes the rest.
- 5 A pack that came short: fill in how many really arrived and say whether the rest is still coming, lost, refunded, or not coming.

DO NOT

"Shop cash" is deliberately not the till drawer. Paying for ingredients out of the till leaves the drawer short at closing and the cashier carrying the blame. There is no way in Clerque to pay from the drawer and add stock at the same time, and that is on purpose.

BE CAREFUL

If a price is ten times above or below what is on file, Clerque refuses it as a likely slip of the finger until you tick that the price really changed that much. Do not tick it out of habit.

Money and goods are two separate moments. Something paid for on the day it was ordered shows as paid then, and waits for the parcel.

1.6 Take in a delivery with no list

Procure, then "Stock on hand", then "Receive stock" on the row. Fill in the quantity, "Cost / unit (₱)", the receipt date and who paid, and press "Receive". The books are written for you.

Spoiled milk or a dropped bottle: "Write off" on the same row, with the amount and the reason. A whole supermarket receipt can go in at once at Procure, then "Upload a receipt" — the ingredients go into stock, the rest into the books, and the photo is filed beside it.

TIP

Receiving at a new price updates the average cost, and every recipe that uses that ingredient follows on its own. You never have to edit a drink because the supplier put prices up.

1.7 Photograph the receipt and let Clerque read it

Procure, then "Upload a receipt". Photograph the whole receipt, flat and in good light — a long one in two or three overlapping strips — and press "Read the receipt". Every printed line comes back with what was bought, how many, and the price.

- 1 The first time a shelf appears: on each line, pick which ingredient it is under "Which ingredient is this?" (or create it), and fill in "One holds" — how much of the ingredient one pack is, in the unit you count it in. A size printed on the item, like 1KG or 250ML, is filled in for you.
- 2 A line that is not stock — the delivery fee, parking — press "Not stock — an expense". A line that should not be recorded at all: "Skip".
- 3 Read the box above "Post to stock". It says what still has to be fixed, and whether the paper adds up: the receipt's own item count against what was read, and the lines against the printed total.
- 4 Press "Post to stock". The goods go on the shelf, the fees into the books, and the photo is filed with the purchase.

TIP

Clerque remembers. Once a line has been tagged and posted, the next receipt from that shelf comes back already tagged and marked "remembered", pack size included — by the product barcode, so a supermarket's abbreviation ("ANGELINA NO SUGAR AD") never has to be worked out twice. To correct a memory, pick the right ingredient and post.

BE CAREFUL

"Everything on the receipt is accounted for" means every line has a home and the paper adds up. It does not check that a price is right: read the numbers against the receipt on any line marked "check the reading".

GOOD TO KNOW

Reads are limited to 50 a day per shop. Typing the lines in by hand posts the same way.

1.8 The day's Z-read

The cashier counts the drawer at "Close Shift" and the screen says balanced, over or short. Pressing it again shows the Z-read, which prints.

To look at past days: Ledger, then "Reports", then "Z-Read History", choose the dates, and export.

BE CAREFUL

Check the digital breakdown against the shop's GCash and Maya the same day. A difference found today is findable; the same difference next week is not. And if nobody closes the last shift, Clerque writes the day's Z-read itself, so no day is ever left without one.

1.9 Money that left the drawer during the day

A cashier can record money spent from the till, or notes moved to the safe, with "Cash Out". Both lower what the drawer is expected to hold, so the closing count still balances. A move to the safe always names an approving manager, and so does anything spent over ₱500 — so expect to be asked in person before it is recorded. There is no undo on the till, so if a cashier tells you a wrong amount went in, sort it before the count.

DO NOT

Ingredients must never be paid for out of the drawer. That kind of entry never adds stock, so the shop keeps selling drinks it no longer has. Buy from "Shop cash" instead, and record it in Procure.

1.10 The end-of-day list of what the day used

It arrives on the bell, and on the phone if Telegram is linked, when the last shift is closed — or two hours after the closing time if nobody closed it.

- Each ingredient, and how much of it went.
- Under it, how much was thrown out and how much was written off.
- At the bottom, what the day used in pesos.
- Press the message to open the full list.

GOOD TO KNOW

It covers the hours from when the day before closed to when this day closed, not midnight to midnight, so a late-night sale lands on the right day. It goes only to you and to managers of that branch. If it mentions items still sitting at the kitchen or bar screen, those are tickets nobody tapped ready — nothing is counted for them until somebody does.

2. Your week

2.1 The weekly count, and making the books match the shelf

The cook and the barista count their own areas on their own screens and send the numbers to you. Nothing has moved yet when they do.

- 1 Procure, then "Cycle counts". The row has a "Review" button.
- 2 At the top it says the count is recorded and that stock and the books have not changed.
- 3 Read the lines: what was counted, what the books say, and the difference. The pills show only what differs, or everything, or what was never counted.
- 4 Either tick the doubtful ones and press "Ask for a recount" — the station is shown those again — or press "Adjust the books to match".
- 5 Choose "Routine count", or for the shop's very first count, "Opening stock".

DO NOT

"Adjust the books to match" cannot be undone. Neither can a count be edited — a wrong number is counted again, never corrected. Read the differences before you press it.

Anything sold while they were counting is kept: stock moves by the difference the count found, not to a fixed number. If two areas counted the same thing, the newer count stands. You can also start a count yourself from this page.

GOOD TO KNOW

A message about this says "Procure > Counts". On the screen the tile is called "Cycle counts". Same thing.

2.2 Chase up the GCash and Maya money

Money paid by phone is not in the bank on the day of the sale. Clerque keeps it waiting until you say it arrived.

- 1 Ledger, then "Settlement", then "New Batch". Choose the payment method and the dates.
- 2 When the money lands in the bank, press "Confirm" on that batch.

- 3 Fill in "Actual Amount Received (₱)", the date it arrived, and the bank reference. Press "Confirm Receipt".

BE CAREFUL

If the amount that arrived does not match what was expected, it is marked as disputed rather than quietly absorbed. That is the point — a fee or a shortfall you never see is a fee you pay forever.

2.3 Read the reports

- Money in and profit: Counter, then "Sales Report" — takings, gross profit and margin, average sale, voids, a table by day, how people paid, and best sellers. It exports.
- What the ingredients did: Procure, "Stock on hand", then "Reports" — stock on hand, purchases, what was used, and the daily sheet.
- Every single stock change: Procure, "Stock on hand", then "Movement Log" — sales, deliveries, batches, write-offs and adjustments, in one place.
- What is holding the menu back: Procure, then "What is limiting the menu" — the one ingredient behind each "x left" number on the till, with a button to put it on the buy list.
- Where things come from: Procure, then "Where things are bought".

2.4 See this month's profit

Ledger, then "Record Entry". The card at the top shows money in, money out, and profit, with arrows to look at earlier months. Money you put in or take out, and moving cash between the drawer and the bank, do not change profit — the card says so underneath.

3. Money that never goes through the till

Rent, the electric bill, wages, a new fridge, your own money going in or out. Ledger, then "Record Entry".

- 1 Pick a tile under "What happened?": "Expense", "Other income", "Bought equipment", "Paid wages", "Owner put in", "Owner took out", "Cash → Bank" or "Bank → Cash".
- 2 Fill in "Amount (₱)" and the date. For an expense, pick a category — Rent, Utilities, Supplies, Repairs, Transport or Other.
- 3 For equipment, say what was bought. Equipment is recorded as something the shop owns, not as this month's cost.
- 4 Choose where the money came from: "Cash", "Bank", and for equipment and wages also "Owner".
- 5 Add a short note and press "Save entry".

TIP

Got it wrong? Press "Reverse" on that line in "Recent entries". An opposite entry is written and the original stays, struck through. Nothing is ever deleted, which is exactly what makes the books worth trusting.

4. First time only

Fifteen jobs, once. Most take five minutes. Two of them decide whether the rest of Clerque works, and they are marked.

4.1 Fill in the shop's own details

Settings, then "Business Profile", then "Business Details". Fill in the name, the tax number, the contact email and phone, and the address, then save. This name prints at the top of every receipt. Only you can change these — everyone else sees that only a business owner can edit them. Sign out and back in afterwards so new receipts pick it up.

4.2 Put the shop's logo on the receipt

Settings, then "Business Profile", then "Business Logo". Press the square that says "Add logo" and choose the picture. A square one reads best. It must be under 1 MB. The small paper printer prints words only, so the logo shows on the screen receipt and on one printed from the browser, not on the little slip.

4.3 Change the words on the receipt

Settings, then "Business Profile", then "Receipt Template". A short line under the shop name, and a footer that replaces "Thank you" — the wifi name, the Facebook page. Watch the preview, then save.

GOOD TO KNOW

Every receipt prints today as an "ACKNOWLEDGEMENT RECEIPT" with the line saying it is not an official receipt. That is decided by the shop's own tax registration, not by this page. Keep issuing the shop's registered receipts exactly as today.

4.4 Set the closing time — the one the whole evening depends on

Settings, then "Branches", then the branch, then "Closes at". Fill in the hour the shop shuts, and save.

DO NOT

Leave this empty and two things never happen at all: the end-of-day list of what the day used is never sent, and the buy list is never sent automatically at closing. There is no other screen that works around it. Do this on day one.

Clerque closes the day when the last shift is closed. If nobody closes it, Clerque does it two hours after this time. A shift closed more than two hours before closing is treated as a handover, not the end of the day.

4.5 Add the staff and give each one the right job

Counter, then "Staff", then "Add Staff". Give the full name, the email, a temporary password of at least eight letters, and the role.

For...	Choose
The person at the till	Cashier. Opens shifts, rings sales, takes payments.
The barista who also rings sales	Cashier.
The barista who only works the bar screen	General Employee.
The cook	General Employee. They can still open the Kitchen screen, the buy list, the prep and the weekly count.
Someone who helps run the shop	Branch Manager.
Someone who only approves voids and discounts	Sales Lead.

- 1 Fill in the "Kiosk PIN" so they can sign in with a number instead of a password.
- 2 Open "Edit" on the new person and set their branch.

DO NOT

Give everyone a branch. Without one, the till, the prep and the count screens simply refuse to open and say the account is not assigned to a branch. This is the most common first-day problem.

BE CAREFUL

Do not tick "clock-only employee" for the cook or the barista — that person can punch in but can never sign in, so they could not open their screen. And everyone needs their own account: signing in anywhere signs that person out everywhere else.

4.6 Numbers and passwords

- Give or change someone's number: Counter, "Staff", "Edit", then "Kiosk PIN".
- Reset a forgotten password: Counter, "Staff", the round arrow on that row, type a new one, press "Reset Password". Ask them to change it after they sign in.
- Each person can set their own number at Settings, then "Security", then "Till & login PIN", and change their own password on the same page.

The same number does three jobs: signing in, unlocking the till after a break, and punching in. Two people cannot share one — Clerque refuses and names whoever has it. Changing a password signs that person out on every other device.

GOOD TO KNOW

Only you can reset somebody else's password. Not a manager. Do not promise a manager they can.

4.7 Set your Supervisor number

Settings, then "Security", then "Supervisor PIN". Four to six digits, typed twice, with your password to confirm.

DO NOT

Until this exists, nobody in the shop can finish a void or a refund — the cashier starts it and there is nothing to approve it with. Set it before the first day of trading.

BE CAREFUL

This is a different number from the one you sign in with. Do not use the same digits. Make it six if a tablet with the separate Counter app is ever used, because that one needs exactly six. A cashier never sees it: they hand the screen over, the number is typed, and both names go on the void.

4.8 Keep what things cost away from the staff

Settings, then "Business Profile", then "Delivery Costs on the Shopping List". Turn off "Staff can see delivery costs".

DO NOT

Staff can see delivery costs BY DEFAULT. Until you turn this off, a cook or a barista opening a shopping list sees supplier prices and the receipt photo. If the shop keeps its buying to itself, this is a day-one job.

With it off, the price boxes, the receipt photos, the reports link on the ingredients page and each ingredient's own page all disappear for staff. They keep what was asked for, what was bought, and how much arrived. The movement log stays visible to them — it has no money column at all.

GOOD TO KNOW

Buying alerts on the phone show what was paid, which is the second reason only you and your managers can receive them.

4.9 Send drinks to the Bar screen and food to the Kitchen screen

Counter, then "Products", then "Categories", then the "Prep screens" panel at the top. Under each screen's name, tap the grey pills for the groups that screen makes. A green pill means it goes there. Tap it again to take it off, or tap it under the other screen to move it.

DO NOT

A group ticked nowhere prints on no screen at all. The drink sells and nobody is told to make it. Anything left grey is listed below as not on any screen — right for a bottled drink, wrong for anything somebody has to prepare. Read that list before you go live.

BE CAREFUL

A group can feed one screen only. Ticking it on the other moves it rather than sending it to both. There is no way to make one group print in two places.

4.10 Rename or join up the Bar and Kitchen screens

Settings, then "Floor Layout". The pencil renames a screen. If the shop was set up with a hot bar and a cold bar but works as one, press "Merge into single Bar" and everything routed to either one moves across.

BE CAREFUL

The number of screens is fixed by the shop's setup. Adding a kitchen or splitting a bar back apart is not something you can do from here — and a merge can only be undone by us. Ask before you merge.

4.11 Set up the kitchen and bar tablets

- 1 Counter, then "Displays". Press "Generate pairing code" on the Kitchen or Bar card.
- 2 It shows the company code and a big four-digit number, counting down.
- 3 On the tablet, open the shop page with /pair on the end and type those two things. The square code fills the number in if the camera reads it.
- 4 The tablet is then listed under "Paired devices" with when it was last seen. "Revoke" unpairs it.

The other way is for the cook and the barista to sign in on the tablet and open their screen. Both work. A paired tablet with nobody signed in can see the queue and press orders through, but sending the buy list and the weekly count needs a signed-in person.

BE CAREFUL

Leave the screen in front on the tablet. Browsers slow down a page left behind another one, and new orders stop arriving. And a cook signed in as themselves has no menu link to the Kitchen screen anywhere — put a bookmark on their tablet, or pair it.

4.12 Tell Clerque when each ingredient is running low — the second one that matters

Procure, then "Stock on hand". Open an ingredient and fill in its alert level: the amount at which somebody should buy more. "Low stock only" at the top shows just the short ones.

DO NOT

An ingredient with no alert level is watched by nothing at all: not the nightly message, not "Check stock" on the buy list, not the count on the Procure home page, and not the cashier's "Buy Now". There is no shop-wide fallback. The nightly message even tells you how many are unwatched.

TIP

Do not try to do all of them. Spend an hour on the thirty or forty things the shop actually runs out of, and add the rest as they bite.

4.13 Set up the things the shop makes in advance

Procure, then "Prep & batches", then "Set up what you prep", then "Set up something you make".

- 1 Pick the ingredient if the shop already buys or counts it, so it keeps its history. Otherwise give it a name and say how it is measured.
- 2 "One batch makes" — roughly how much one pot yields. Do not know? Start from what goes in; the cook can measure the first pot and the number corrects itself.
- 3 List what goes into one batch, and how much of each.
- 4 "Tell me when it drops below" — the point where somebody should start the next batch.
- 5 Press "Set it up".

DO NOT

Until a syrup is set up this way, making it moves nothing. The sugar and the water stay on the books and the syrup runs out mid-service while Clerque still believes it is there.

BE CAREFUL

Leave the warning level blank and nothing will ever tell anyone it is running out. The card says so on its face. The cook and the barista can write down a batch themselves, but only you or a manager can set one up.

4.14 Get every sale and every buying step on the phone

Settings, then "Telegram alerts". Press "Make my link", then "Open Telegram" on the phone that should get the messages, and press "Start" there. The page turns green when it is linked. Tick what you want: every sale, and the buying messages — a list sent, what was bought and for how much, receipt photos, when it goes into stock, and each day's ingredients used. "Send a test alert" checks it.

BE CAREFUL

The link is personal, works once, and lasts ten minutes. Do not forward it or photograph it. Each person links their own phone, and only you and branch managers can link at all — the buying messages show what the shop paid. Sale messages leave out card numbers and customer details.

GOOD TO KNOW

If the page says Telegram is not switched on for Clerque yet, that is ours to fix. Ask us.

4.15 Choose which books you want

Settings, then "Business Profile", then "Ledger mode". "Simple books" records money in and out and shows your profit, with no accounting words. "Full accounting" adds the journal, statements, bills, tax and periods. Sign out and back in for it to take effect.

Nothing is lost either way — the records are the same, only more of them are shown. Simple books gives a coffee shop everything it needs day to day. Closing a month, so nothing can be back-dated into it, only exists on full accounting. Decide with us which one to go live on.

5. If something looks wrong

Q: Sales went missing after the internet dropped.

A: Counter, then "Pending Sync", then "Sync Now". Each sale carries its own tag, so nothing is ever counted twice.

Q: The profit looks too good.

A: The amber box on the Dashboard names how many items have no cost recorded. Press "Fix products now" and give them one.

Q: Stock looks untouched by sales.

A: Check that Settings, "Business Profile", "Ingredient Deduction" is not paused. If it was paused while recipes were being written, Procure, "Stock on hand", "Recipe Catch-Up" replays the backlog.

Q: Procure says it could not check stock levels.

A: Open the buy list and check the shelf by hand before anybody leaves for the market. Do not send people out on a list that did not load.

Q: A screen says the account is not assigned to a branch.

A: Counter, "Staff", "Edit", set the branch. See 4.5.

Q: Nothing appears on a kitchen or bar tablet.

A: Two things to check: the group is ticked under that screen in "Prep screens" (4.9), and the tablet's page is in front rather than behind another one.

Q: No end-of-day message arrived.

A: The branch has no closing time. See 4.4.

Q: An account is locked out.

A: Five wrong tries in fifteen minutes does it, and it clears itself after fifteen minutes. Nothing to do.

Q: Somebody was let through where they should not have been.

A: Settings, then "SOD Violations" — the shop's record of every time somebody was let past a rule. Voids, price changes, settings changes and sign-ins are all written down there and cannot be erased.

Q: I do not understand a message on the screen.

A: Photograph it and send it to us with what you were doing at the time. That is almost always enough to answer it in one reply.

6. What only we do

- Create the shop and its code, and set its tax standing and tax number.
- Decide what the receipt is allowed to say, and switch it over when the shop's own permit is on file.
- Add a screen beyond the ones the shop already has, or undo a merged bar.
- Unlock an account that will not clear, sign a stuck device out, or freeze the shop if something has gone badly wrong.
- Load the shop's ingredients, recipes and opening balances from a file.

Email devsupport@hnsCorpPh.com with the shop name, what you were doing, and a photo of the screen.

GOOD TO KNOW

Nobody at HNS looks at the shop's money. What we can see is whether things are running, never what was earned.

7. What even the owner cannot do, and why

You can do almost everything in Clerque. These are the handful you cannot, so you never spend an evening looking for a screen that is not there.

You cannot...	Why, and what to do instead
Have a branch manager ring sales at the till	A manager supervises the till; they do not ring on it. That separation is exactly what makes their approval of a void worth anything. You yourself can open a shift and ring sales — in a shop this size the owner is meant to.
Make a manager who can only look	The roles are a fixed list. The only lever is changing somebody's role. The extra ticks on the staff screen only ever add, never take away — do not rely on them to hold a manager back.
Add a Kitchen or Bar screen, split a bar, or undo a merge	The number of screens is fixed by the shop's setup. Ask us.
Make one menu group print on both screens	A group feeds one screen only.
Load sizes and add-ons from a spreadsheet	They are set by hand on the Categories and Products screens.
Edit or undo a weekly count	The numbers are a record. The only correction is to ask for a recount. "Adjust the books to match" cannot be undone either.
Print the logo on the small paper slip	That printer prints words only.
Change the business type, tax standing or tax number	Set once, at setup. Ask us.
Print an official receipt from Clerque	Every slip prints as an acknowledgement receipt with the disclaimer. Keep issuing the shop's own registered receipts. We switch it over when the permit for Clerque is on file, and never before.
Work around a missing closing time	There is no other screen for it. Without it the evening messages simply never happen.
Fall back on a shop-wide low-stock level	An ingredient with no alert level is watched by nothing.
Switch Telegram on yourself	If the page says it is not set up, only we can fix it.
Pay for ingredients from the till drawer	There is no way to record a drawer payment that also adds stock. "Shop cash" is deliberately cash kept apart from the till.

And one thing worth knowing about the cost-hiding switch

Turning off "Staff can see delivery costs" hides prices, receipt photos and the ingredient pages from staff. It does not hide the movement log, which staff can still open — but that log has no money column, so what they see there is amounts moving, never what anything cost.

This guide describes Clerque as it works today. If a screen says something different from this page, trust the screen and tell us so the guide can be corrected.
