

Clerque — Kitchen & Bar Guide

Your screen: the orders waiting, what to make ahead, and the count at the end of the week.

START HERE

Your tablet should already open on your own screen — the Kitchen screen in the kitchen, the Bar screen at the bar. Nobody signs in and nobody types a password. If it asks you to sign in, or shows the wrong screen, see number 1. Something not working? Ask the owner first. If the owner is stuck too, email devsupport@hnsCorpPh.com with the shop name, what you were doing, and a photo of what the screen said.

Three things on this screen keep the shop honest: tapping a ticket when it is really ready, writing down a batch when you make it, and writing down anything you throw out. Everything else follows from those three. Read this once from the front, then come back to the number you need.

1. Getting your screen up

The normal way: a tablet that is already paired

A paired tablet needs no sign-in and stays paired for months. It sits on your screen and nothing else.

- 1 The owner or the cashier makes a code: in Counter, press "Displays" in the menu down the side, then the Kitchen or Bar card, then "Generate pairing code".
- 2 A box shows the shop's "Company code" and a big four-digit number, counting down.
- 3 On your tablet, open the shop page with /pair on the end. It reads "Pair this device".
- 4 Type the company code, then the four numbers, and press "Pair device". The tablet goes to your screen and stays there.

BE CAREFUL

The number lasts fifteen minutes and works once. Too late and it says "Code expired — ask for a new one." A Kitchen code will never show the Bar's orders.

If the screen ever says it is signed out or unpaired, nothing is lost. Press "Pair this screen again" and ask for a new code.

The other way: your own sign-in

On a stand-in tablet, a phone or a laptop, sign in as yourself and open the bookmark for your screen. Keep that bookmark — the address never changes. A barista who also works the till can open it from the top of the Counter screen instead, where there is a button named after each screen.

BE CAREFUL

A cook signed in as themselves has no menu link to the Kitchen screen anywhere in the app. Ask the owner to put the bookmark on the tablet, or use a paired tablet.

BEFORE THIS WORKS

The station needs its screen turned on by the owner in Settings under "Floor Layout". Without it, pairing is refused with "That station has no screen turned on."

2. Turn the bell on, and give it its first tap

Do this every time the screen is opened or the tablet is restarted.

- 1 Look at the top right. "Bell on" in orange means it is on. "Bell off" in grey means it is off. Tap it to change.
- 2 While an orange strip along the bottom asks you to tap the screen once, do it — tap an empty part, not a ticket.
- 3 Tap "Test" to hear it. It rings twice for each new ticket.

TIP

That first tap is not fussiness. Tablets refuse to make any sound until somebody touches the screen. Without it the bell looks on and stays silent all morning.

The bell also rings when something made in advance turns into "needs doing now", and when a batch goes past its date. On or off is remembered on that tablet, not on you.

3. Read a ticket

- Each card is one order, with its number at the top. Oldest first.
- The clock at the top right of the card is how long the oldest thing on it has waited.
- A green edge is under five minutes. Amber is over five. Red is over ten.
- Under the number is each drink or dish. The size and add-ons are in the small grey line beneath it.
- Anything the customer asked for specially is in orange with a star. Read those first.
- Nothing to make? It says "All caught up".

GOOD TO KNOW

Only what the owner has sent to your screen appears here. A bottled drink or a pastry that nobody has to make never shows up, and that is right. If the screen cannot reach the shop it says so in words — it will never sit looking "All caught up" while orders are waiting.

4. Tap a ticket when it is ready

This is the most important tap on the whole screen.

- 1 Tap the line for the thing you have finished. It says "tap to bump" on the right until you do.
- 2 The line turns green and gets a tick.
- 3 When every line is tapped, the card leaves the screen.

DO NOT

That tap is the moment the milk, the beans, the cup and the lid come off the shelf in Clerque. Tap it once, when it is really ready — not early, and not all at once at closing. Tapping early makes the shop's numbers wrong for the rest of the day.

A ticket nobody ever taps is counted in the small hours anyway, so the books come right in the end — but the shelf was wrong all day and nobody knew. Tap as you go.

If it will not take: "This order was voided. There is nothing to make." means the till cancelled it. "This item was refunded." means the customer got their money back. Either way, do not make it.

BEFORE THIS WORKS

A drink only reaches your screen when the owner has ticked its group for your screen, in Counter under Products, then Categories, then "Prep screens". A group ticked nowhere prints on no screen at all.

5. Undo a tap made by mistake

- 1 A tapped line stays on the screen for about half a minute.
- 2 Tapping it again is refused for you: "Only a supervisor or manager can undo a bump."
- 3 Call the manager or the owner. They sign in on that screen and tap the line.

Do not keep tapping. It will not work and nothing is broken. The undo also puts the milk and the beans back, which is why it belongs to somebody in charge.

6. Orders, prep levels, or both

The three buttons at the top share the screen out. "Orders + prep" is the usual one: orders across most of it, what is made in advance down the right. "Orders" gives the whole screen to the orders, and the number beside it is how many are still to make. "Prep levels" gives the whole screen to what is made in advance. "Full screen" hides everything around the edges, and stops the tablet going to sleep.

Whichever you pick, the orders keep coming in underneath and the bell still rings. Your choice is remembered on that tablet.

7. Read the prep levels

Look at these at opening, after the rush, and whenever the bell rings for them.

- Each card is one thing — a sauce, a syrup, breve milk. Read it from the top down.
- The headline says the one thing to do, like "Level 1: 12 servings left — make a batch from Level 2."
- "Level 1" is the tub you serve from. "Level 2" is the one behind it. "Level 3" makes Level 2.
- Red means do it now. Amber means next. Green means fine. Grey means nobody set a warning level, so nothing is watching it.
- Beside Level 1 it may say roughly how many servings are left.
- Worst first. Cards that need nothing sit lower down.

"Every prep level is fine." means all clear. If it adds that items with no warning level are not checked, tell the owner — those are the ones that run out with no warning at all. Use-by amounts are worked out on the shelf, not counted: the oldest batch is taken to be used first. A card that says something is out, with the button greyed, cannot be fixed from this screen — put it on the asking list instead (number 11).

BEFORE THIS WORKS

Only things the owner has set up appear here, in Procure under "Prep & batches" — each with its recipe, how much one batch makes, and a warning level. With nothing set up the screen says "No pre-made items here."

8. Write down a batch you just made

The moment the batch is made or moved — not later when the tub runs low.

- 1 Find the card. Under the button it says what one batch uses.
- 2 Tap the orange button once. It changes to "Tap again to record 1 batch" and glows for about five seconds.

- 3 Tap it again. A green message confirms what was recorded.
- 4 One batch per pair of taps, at the size the recipe says. There is nothing to type. Two batches means doing it twice.

TIP

Two taps on purpose. One tap used to be enough, and a knocked tablet took ingredients off the books with nothing to undo it. If you wait too long the button goes back to its own words — just start again.

Tapping twice by accident, or tapping again after the connection drops, never records it twice: it answers "Already recorded. Nothing was made again."

If it will not go through, it tells you why — usually not enough of something, and it names what and how much. Nothing was recorded. Something belonging to the other screen is refused too: each of you records your own.

BE CAREFUL

Made ahead of the rush — wings marinated overnight, syrup cooked early? Write it down then. Until you tap, the raw ingredients look untouched and the day's sheet is wrong.

9. Throw something out

The moment it happens.

- 1 Tap "Today's inventory" at the top.
- 2 Find the item and tap "Thrown out" under its name.
- 3 Say how much. For things bought by the pack there is a one-tap button for a whole pack.
- 4 Pick why: "Spoiled", "Past its date", "Dropped or spilled" or "Other".
- 5 Add a few words if it helps, then tap "Record it".

TIP

This is not telling on anybody. It takes the milk off the shelf in Clerque and puts it in the thrown-out column, so the numbers match the fridge and the owner buys the right amount. Milk quietly poured away is milk the shop thinks it still has — and then somebody is short on a Saturday.

If it says the books show less than you threw out, record what you can and tell the manager so the count can be put right. If it says the item is not on your sheet, it belongs to the other screen — ask the manager. And it can only go on today's sheet: step back a day and the buttons are gone.

10. Read today's sheet

- 1 Tap "Today's inventory". The heading names whose sheet it is, with the day, and "Running" or "Closed".
- 2 Each line is one item, in groups: what is made in advance, ingredients, and supplies.
- 3 Read the columns across: what you started with, what came in, what was thrown out, what the drinks and dishes used, and what should be there now.
- 4 The arrows at the top step back and forward a day.
- 5 "Print" prints it on paper with lines to sign. "Close" goes back to the orders — they keep coming in behind it and the bell still rings.

Amounts only. There is no money anywhere on this sheet, on purpose. If a note in orange says some items are still at the kitchen or bar screen, those are tickets nobody has tapped ready yet.

11. Ask for what is running low

Once a day near closing, or the moment you notice something short.

- 1 Tap "Request what's running low".
- 2 Clerque works out what is needed for the next day, puts it on the branch's one list, and sends it to the owner.
- 3 A box tells you what happened, and what is new, what was raised, what is already on the way, and what you could make instead of buying.
- 4 Tap "Done" when you have read it.

The kitchen's tap and the bar's tap go on the same list, so nothing is asked for twice. Tapping again is safe. You are asking, not buying — the owner does the buying.

BE CAREFUL

In the first weeks it says Clerque is still learning the shop's usage. An empty list then does not mean all is well. Add what you know is short with "Add something".

Add something the list cannot see

- 1 Inside the same box, tap "Add something".
- 2 Type the name. Tap it if it is already there.
- 3 If it is new, tap "New item", mark it as a kitchen, bar or office supply, and pick how it is measured.
- 4 Set how much with minus and plus, then tap "Add and send".

Tissue, dish soap, cling film, a new syrup nobody has bought before — this is where they go. Twenty things at most in one go.

12. The weekly count

Once a week, when the button says "Count due" with an orange dot. Best before opening or after closing.

- 1 Tap "Count due". The panel says "Weekly count" with your screen's name and how far along you are.
- 2 On a paired tablet it asks "Who is counting?" once. Type your name — the owner sees who counted.
- 3 Go down the list. Tap an item, then say how many full packs and how much is open or loose. It checks back what that adds up to.
- 4 Tap "Save and next". Nothing left of something? Tap "None left".
- 5 When it says everything is counted, tap "Send to the owner".

DO NOT

Count what is really there — in the shop, the fridge and the shelf. The screen never shows you what Clerque thinks should be there. That is on purpose, so the count is honest and not a guess at the right answer.

Saving and sending change nothing at all. Only the owner moves the numbers, after looking at what you counted. Counting an item again before you send simply replaces the first figure.

Sending partway asks first, and what is not counted is left out. If it says some orders are still being made, finish those tickets — the numbers settle once they are tapped ready. After sending, the count is closed and cannot be edited.

When the owner asks for a second look

The button shows "Count due" again and a note names the items. Those rows are marked "Count again", and the panel jumps from one to the next. Count just those and send. Being asked again is normal — it usually means a delivery or a thrown-out item was not written down, not that anybody did anything wrong.

13. Print a ticket at your own printer

If your shop has a small printer on this tablet, a printer picture sits at the top right of a ticket. Tap it and the ticket prints there — the kitchen tablet on the kitchen printer, the bar tablet on the bar printer. On a computer the picture is simply not there, and nothing is wrong.

14. At closing

- 1 Clear the rail: tap every finished line until the screen reads "All caught up".
- 2 Write down anything thrown out during the day that is not written down yet.
- 3 Write down any batch made late that is not written down yet.
- 4 Tap "Request what's running low" so the owner has tomorrow's list.
- 5 Open today's sheet and read down the last column. If a number looks wrong, say so tonight — it is far easier to find today than next week.
- 6 If your shop signs the sheet, tap "Print", sign it, and leave it for the manager.
- 7 Leave the tablet on and on this screen. A paired tablet needs nothing else.

The day's sheet closes when the last shift at the till is closed. Anything thrown out or made after that goes on the next day's sheet. If nobody taps the asking list, Clerque sends it to the owner at closing anyway.

15. What your screen cannot do, and why

None of this is about trust. These are the shop's safety rails, and a few of them exist to keep you out of arguments you should never be in.

You cannot...	Why, and what to do instead
Undo a ticket you tapped ready	A manager or the owner signs in on that screen and undoes it. The undo puts ingredients back on the shelf, so it belongs to somebody in charge.
Cancel or give money back on a sale	That is the till, the same day, with a reason and a supervisor's number.
Type a stock number in to fix it	Only three things move stock from your screen: tapping a ticket ready, writing down a batch, and writing down something thrown out. Everything else is the owner.
Make the weekly count change anything	A count is a record, nothing more. The owner compares it and decides. Do not tell anyone that counting "fixes" the number.
See what Clerque expects while counting	Deliberately hidden. A blind count is an honest count.
Write down the other screen's batch	The bar records the bar's, the kitchen records the kitchen's. It will say so if you try.
Write down something thrown out on an earlier day	Today's sheet only. Anything older goes through the manager.
Buy anything, or take in a delivery	"Request what's running low" asks. The owner buys.
Pair a tablet, turn a screen on, or set up what the shop makes in advance	All of that belongs to the owner, on the Counter and Procure screens.

And one thing nobody will ever ask you

You will never be asked what anything costs, what a drink sells for, what the shop took today, or what anybody is paid. None of it is on your screen. Every price is stripped out before your screen ever sees it, so there is nothing there to look up even by accident. Your screen deals in amounts — millilitres, grams, packs, servings — and nothing else.

This guide describes Clerque as it works today. If a screen says something different from this page, trust the screen and tell the owner so the guide can be corrected.
